Computational Neuroscience: Neural Dynamics

Gregor Schöner
Gregor.Schoener@rub.de
Language

- slides will be in English
- lectures will be in English
- ask questions in German and ask for clarification of terms
Who am I

- theoretical physicist by training, but working in theoretical neuroscience/cognitive science and motor control for over 20 years
- second life as a roboticist/computer vision person
- way stations: Saarbrücken, Stuttgart, Boca Raton Florida, Bochum, Marseille, Bochum...
What am I?

- Chair Theory of Cognitive Systems
- Director of the Institut für Neuroinformatik
- joint appointment in the Faculty of Physics and Astronomy and in the Faculty of Electrical Engineering and Information Technology
My research

- research in two related areas
  - embodied cognition: motor control, movement planning and representation, decision making, action and spatial memory, visual working memory, perceptual representations, motion perception
  - autonomous robotics: vehicles, manipulators, man-machine interface, object recognition, behavioral organization, learning

- based on the theoretical approach of “DST” (dynamical systems theory) and “DFT” (dynamical field theory)
Oliver Lomp

- will run the exercises
- also available for questions etc.
- Oliver.Lomp@ini.rub.de
- is a AI master himself, now doctoral student at INI, close to finishing…
  - developer CEDAR framework
  - object recognition and shape perception in DFT
Would your present yourself, please?

- Name
- which discipline
- which semester
- taking this course
  - as course in Angewandte Informatik Master program
  - as “nicht-X Nebenfach”
  - as “Vertiefungsfach”
  - for fun...
Would you please send an email to oliver.lomp@ini.rub.de

- with your name
- Matrikelnummer
- Studiengang and -semester, PO

(use the email address that you are going to use throughout)
Exercises

- hand-outs ... hand-ins!
- will be corrected and discussed by Oliver Lomp
- there will be readings, to which exercise sheets will be directed
- there will be an essay, a longer exercise sheet requiring writing organized longer text
Rules

1. Exercises are the actual platform for learning. All exercise sheets and reading assignments need to be turned in at the agreed time, usually the week after they have been given out. They will be corrected and graded. Handing in the assignments on time is the prerequisite for obtaining Bonus points.

   - Late delivery is accepted only if announced ahead of time with an excuse. Send an email to me or to oliver.lomp@ini.rub.de.

2. The written solutions to exercises and assignments should be written in English or German, using complete sentences. When Matlab code is requested, that code should be sent by email to liver.lomp@ini.rub.de.

   - Structure your answers intelligently, first explaining assumptions and conventions.
   - Make drawings whenever useful.
   - If you use mathematical formalism, define your variables.
3. There will be one essay assignment, in which you will be asked to produce a longer text (e.g., on the order of 10 pages) to discuss an issue based on a scientific article that you will have to read.

4. The exercises handed in are corrected and graded (on a % scale). The grades multiply the Bonus points obtained for each exercise. Bonus points for the essay are multiplied by 3. The maximal total number of bonus points for exercises and essay will provide for up to 1/3 of the grade of the course.
5. There will be a written or oral exam at the end of the lecture course. In the exam, no written material can be used except for a sheet of paper (size A4), on which you have made notes as reminders (you can use both sides, can be hand-written or printed, can include drawings).

6. A prerequisite for a passing grade in the course is that the exam achieves a mark of at least 50%. Below that threshold, the mark will be a “fail”.

7. If the threshold is passed in the exam, the final grade for the course is computed from the mark of the exam with a weight of 2/3 and the mark from the bonus points with a weight of 1/3 as long as this grade is better than the mark of the exam. Otherwise, the final grade is the mark obtained in the exam.
all slides, exercises, and this rule sheet are available on the web:

http://www.ini.rub.de/courses/71-Computational%20Neuroscience:%20Neural%20Dynamics
some exercises will make use of Matlab (that “matrix laboratory”), an interpreted language for numerical simulation.

a free license is available for RUB students… go to

https://www.rz.ruhr-uni-bochum.de/dienste/software/beschaffung/firmen/matlab.html
Schedule

- every thursday 14:15 to 16:00
- exercise from 16:15 to 17:00
- in room IC 03/411
We will be following a new book (to be published on November 9, 2015)
We will essentially do the first 4 chapters (of 15)

You will get to read them...

2 are on the web page now
